

Greetings from

Hayland Woods

Native Perennials for Shade and Shore

Hayland Woods, a small Central Minnesota nursery, specializes in growing native plants that thrive in shady areas and on shorelines. We supply high quality ferns, grasses, sedges, and perennial flowering plants for residential gardens or to restore a woodland, wetland, or lakeshore to its natural low maintenance beauty. We are happy to assist contractors and homeowners in choosing plant materials appropriate for your project. While we do not grow prairie or wet meadow species, we work with other growers so that we can provide one-stop shopping and delivery of all of the plant materials you need for your project to your site.

Our services include on-site consultations for shoreline stabilization and maintenance recommendations, developing site plans, exploring cost-share opportunities, installation of projects, and coordination of maintenance activities.

Native plants provide:

Year round color, from delicate spring ephemerals to the last asters of fall
Low maintenance ground cover for trouble spots with deep shade where few
conventional lawn and garden plants will grow

Sensible solutions to stabilize sites that are wet, acid, clay, or sand using hardy
local species adapted to these conditions

Spring 2015 Prices:

Wildflowers	6 packs - \$1.50/plug	\$9.00
